

POWDER & INDUSTRIAL COATINGS

DURALLOY

DURATEC®

Exquisite colours for Aluminium Joinery

This Colour Guide incorporates the very latest in powder coating technology coupled with the latest colours this technology makes possible. The colour range is chosen from old favourites and the very latest international colour trends and are arranged in a manner designed to make harmonious colour selection much easier.

Aluminium is the only warrantable substrate, but these powder coatings are equally at home on Galvanised or mild steel.

powder coating warranties and the environment

DURALLOY

- Extruded aluminium window & door joinery
- Residential and small commercial developments
- Building up to three levels above ground
- Properties greater than 100 meters from high tide level
- Where AAMA 2603 performance is desired
- Where a 10 year film and colour integrity warranty is required
- For projects outside these parameters, check with your Dulux® representative.

DURATEC®

- Extruded aluminium window & door joinery
- Prestigious residential and commercial developments
- All major architectural developments
- Properties greater than 10 meters from high tide level
- Welded aluminium sections greater than 100 meters from high tide level.
- Where AAMA 2604 performance is desired
- Where a 15 year film and colour integrity warranty is required
- For projects outside these parameters, check with your Dulux® representative.

premium pearls

Metallic / Pearlescent finishes

The Premium Pearl offering utilises Dulux's Kinetic® Technology in both Duralloy and Duratec chemistry. The Kinetic® technology increases the ease of application and allows Dulux to present a finish that is not only very uniform, but also delivers a coating that has sparkle and movement in its appearance.

This characteristic may mean that the appearance of the colour can change in different lighting and viewing angles or where the coated substrate is in several different planes.

Our Premium Pearls may be a little more expensive than your average run of the mill colour, but then these Premium Pearls are not your usual run of the mill colours.

brown

Browns are now the current popular flavour, and in the Duralloy Colour Guide, we have browns in abundance, from deep rich browns such as Lignite or Ironsand, to lighter beiges such as Matt Bronco or Desert Sand and even Pearlescent browns on the Metropolis Pearl page such as Mineral Brown and Electric Cow.

blue

Blues are the cool, clear colours of the sea and sky. They are aristocratic colours that can suggest peace and harmony or add a bold accent in furnishings or trim. Blues can cool a warm room, or provide a contrast to the hot colours of an arid landscape.

white / cream

White in its purest form can be stylish and cool or stark and demanding. This is responsible for its enduring popularity as a trim colour and as a main decorating theme. Works of art, collections and fabrics are all presented to advantage in a white environment.

beige / yellow

Beige is classical, soothing and commonly used in conjunction with earth tones to create an atmosphere of peace and serenity.

From sandy beige to rich ochres, yellow radiates warmth and friendliness.

metropolis[®] pearls

The Metropolis Range of Pearls includes some of the most popular trim colours including Metropolis Silver Pearl, Silver Star, Window Bronze and the wonderful Electric Cow.

The entire Metropolis Range has a pearlescent or metallic content that brings the coating to life, sparkling in the sunshine.

For technical reasons associated with colour reproduction, the colours shown give only an indication of shade and pearl content. No guarantee can be given that they will exactly match the powder product.

ELECTRO™
POWDERCOAT RANGE

ELECTRO™
POWDERCOAT RANGE

Electro®, a new super durable range

the electro look

Unlike traditional anodic deposition finishes which are restricted to aluminium, architects, designers, and colour consultants will love the flexibility and freedom the Electro® range palette of colours offers. With relative ease, Electro® powder coatings can be applied to a wide variety of substrates such as aluminium, steel, and galvanised metal, making perfect colour co-ordination possible across many different construction elements, fixtures, and fittings.

guaranteed to last

Made from high durability, UV resistant raw materials, the tough yet flexible Electro® range of powder coatings, when applied by a 'registered applicator' on architectural aluminium, can carry a 15 year, exterior durability, performance warranty. The Electro® range of powder coatings is suitable for use in a wide variety of climatic conditions from cold to hot, and humid to dry environments.

black

The most powerful colour, although technically not a colour at all, black can conjure up images of mystery, or elegance and sleek sophistication. The strength of black is often emphasised by using it with white. Black and white tiles, or a high gloss black front door convey a universal message of style and sophistication.

grey

In theory grey is the only true neutral, but in practice greys come from all around the spectrum. Greys work well with yellows and reds, are subtly unobtrusive with creams and blues and sumptuously sophisticated in combination with light yellows and beige.

red

Reds, Corals & Pinks are warm, vibrant colours that create a sense of intimacy and strength. Ranging from soft shades of coral and pink to bold, aggressive reds, these are colours that should be used with care. The paler tones are cheerful colours that reflect light to warm or brighten cool or dark rooms.

light grey

Grey which like black is a non-colour, is the true neutral, and thus risks being bland and uninteresting. However, when the right tone is selected, anywhere from charcoal or slate through to soft dove, grey can be an ideal backdrop or accent in practically any colour scheme.

green

Currently the most popular decorating colour, green symbolizes nature. It is the easiest colour on the eye and can improve vision. It is a calming, refreshing colour. People waiting to appear on TV sit in "green rooms" to relax. Hospitals often use green because it relaxes patients. Dark green is masculine and conservative. Greens can be fresh & fruity, acid lime or warm and relaxing olives.

mannex®

The Duralloy Mannex® range has been designed especially for entrance doors, to add an extra little pizzazz to an area that is often a feature in terms of colour and design.

The Duralloy® Mannex® Range have been specially formulated as a tactile textured finish, that plays with the light and gives depth and interest to the surface. These specially chosen finishes have been formulated to be a hard durable film that displays a depth of character in the textured finish but also resists scuffing. With entrance doors often protected from the weather, rain seldom strikes the surface so new technology has been embodied in the Duralloy® Mannex® range giving the powder coating easy clean properties.

Please take time to check an actual powder coated sample of the colour of your choice

performance and quality assurance

Dulux Powder & Industrial Coatings, manufacturer of Dulux branded powder coating, is committed to providing products that strictly adhere to the ISO standard for quality management. The result is a range of powder coatings, that simply work better in New Zealand's unique climatic conditions.

Our two level performance guarantee

1. The first covers film integrity, which is a warranty that the film will not peel or crack or flake, when applied by a Dulux Registered Applicator. The Duralloy products in this guide can carry a warranty of 10 years film integrity, the Duratec products 15 years film integrity on extruded aluminium.

2. Secondly, and one most customers assume is warranted, colour performance. This is simply the ability of the coating to retain its colour and performance within stated parameters for a given period.

The Duralloy products featured here all have a colour performance warranty of 10 years, the Duratec products 15 years, when applied to residential and commercial aluminium sections by a Dulux Registered Applicator.

Dulux Registered Applicators

All the warranties offered by Dulux® in this booklet are conditional on the powder coatings being applied by Dulux Registered Aluminium Applicators. These applicators are only certified after demonstrating their capability to meet stringent quality conditions and international standards.

Each registered aluminium applicator has invested heavily in their business to guarantee their performance in preparing the aluminium and applying the premium Dulux® finishes shown in this guide.

care & maintenance

To comply with warranty requirements and to extend the effective life of powder coatings, a very simple regular maintenance programme should be implemented.

1/ Carefully remove any loose deposits with a wet sponge.

2/ Use a soft brush (non abrasive) and a mild household detergent solution to remove dust, salt and other deposits.

3/ Rinse off with clean fresh water.

Do remove obvious deposits as they occur.

Do mask windows if painting.

Use only Methylated Spirits, Isopropanol or water to remove fresh paint splashes.

Do not use abrasive-steel wool, scrapers, scouring liquids or powders to remove paint splashes - these will damage your powder coating.

Do not use aggressive solvents-thinners, petrol etc. these solvents will attack gloss levels and reduce the powder coatings life expectancy.

Do not expose your joinery to excessive heat- heaters or hot air guns - these may damage the powder coating. If through some misadventure your powder coated aluminium joinery is scratched or damaged, don't panic. Dulux® colour Repair Kits are available.

Do contact Dulux® Powder & Industrial Coatings on 0800 800 975 for further information or advice.

Take care at installation time

Your window manufacturer puts considerable effort into protecting your powder coated joinery right through to installation time, however it is at this time that your joinery is perhaps most at risk of damage. For this reason your window manufacturer uses stickers, recommended by the Window Association of New Zealand, to help to protect their product.

These stickers read:-

"IMPORTANT ALL TRADES"

This valuable aluminium joinery will suffer **permanent** damage from: plaster, mortar and paint splashes - **Protect** if splashes occur - **Immediately** wash down joinery with water or meths - **Do not** allow splashes to harden! - **Do not** use solvents! - **Do not** remove this label until final clean completed.

All the activity on a construction site means that your window joinery may get knocked or scratched, splattered with mortar, plaster, textured coating or paint during the later stages of construction. Please ensure that your window and door joinery is masked at this time. It is far easier to prevent accidents than to try and correct them. Should your joinery receive mortar or paint splashes see that these are removed before cure and follow the instruction contained in this colour card or in the Dulux® Powder & Industrial Coatings Use and Care brochure.
